The word stems from the old French verb rapporter which means literally to carry something back; and, in the sense of how people relate to each other means that what one person sends out the other sends back. Thu, 29 Nov 2018 20:56:00 GMT Rapport - Wikipedia - In statistics, a pivotal quantity or pivot is a function of observations and unobservable parameters such that the function's probability distribution does not depend on the unknown parameters (including nuisance parameters). A pivot quantity need not be a statisticâ€"the function and its value can depend on the parameters of the model, but its distribution must not. Tue, 04 Dec 2018 06:45:00 GMT Pivotal quantity - Wikipedia - Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
