overhauled in 2006.

International Republic  
Seabee Owners Club - The  
air traffic control radar  
beacon system (ATCRBS)  
is a system used in air  
traffic control (ATC) to  
enhance surveillance radar  
monitoring and separation  
of air traffic. It consists of a  
rotating ground antenna and  
transponders in aircraft. The  
ground antenna sweeps a  
narrow vertical beam of  
microwaves around the  
airspace. When the beam  
strikes an aircraft, the  
transponder transmits a  
return ... Air traffic control  
radar beacon system -
